

Nika Beroshvili

Software Engineer

📍 Tbilisi, Georgia ✉ nikolozberoshvili23@gmail.com ☎ 591 41 42 82 🌐 nika-beroshvili-dev

Professional Summary

Software Engineer with 4+ years of experience building and maintaining production web and mobile applications. Experienced in React Native, React, Next.js, NestJS, and TypeScript, with a strong focus on modernizing legacy systems, optimizing application performance, and delivering reliable software throughout the full development lifecycle. Passionate about clean architecture, continuous learning, and building products that solve real-world problems.

Skills

Languages: TypeScript, JavaScript, SQL (PostgreSQL, MySQL), Kotlin (Working Knowledge), Swift (Working Knowledge), Java (Working Knowledge), Objective-C (Working Knowledge)

Frontend: React, Next.js, HTML, CSS, Tailwind CSS

Mobile: React Native, React Navigation, Redux, React Query, Zustand, Turbo Modules, Native Android Integrations, Native iOS Integrations, Firebase

Backend: NestJS, Node.js, REST APIs, WebSockets, JWT

DevOps & Cloud: Docker, AWS (S3, SNS), Nginx, Fastlane

Development Tools: Git, Xcode, Android Studio

Experience

Softgen, Software Engineer

Tbilisi, Georgia
Dec 2025 – present
9 months

- Develop new features and maintain web, backend, and cross-platform mobile applications using React, React Native, Next.js, NestJS, and native mobile technologies.
- Drive architectural improvements, evaluate technical solutions, and select libraries to support scalable and maintainable products.
- Collaborate directly with clients, product stakeholders, and cross-functional teams to define requirements, estimate work, and deliver production-ready features.
- Investigate production issues, manage application releases, and continuously improve software quality and reliability.

EasyPay, Mobile Engineer

Tbilisi, Georgia
June 2025 – Dec 2025
7 months

- Led the development of the company's React Native fintech application from the ground up.
- Designed the application architecture, selected technologies, and established the project's technical foundation.
- Collaborated directly with clients to transform business requirements into production-ready mobile solutions.
- Improved application performance, security, and reliability while investigating and resolving production issues.
- Managed mobile releases and ensured high-quality deployments to the App Store and Google Play.

Orient Logic, Mobile Engineer

Jan 2022 – July 2026

4 years 7 months

- Developed and maintained production React Native applications for fintech and government projects from implementation through production release.
- Modernized legacy applications by introducing a feature-based architecture, improving performance, stability, and long-term maintainability.
- Designed technical solutions, reviewed code, and collaborated with product owners throughout the software development lifecycle.
- Built Android and iOS CI/CD pipelines with GitLab Runner and Fastlane, automating build and signing processes for release candidates.
- Investigated production issues, optimized application performance, reduced crash rates, and supported production releases.

Freelance, Software Engineer

June 2023 – May 2025

2 years

- Delivered custom web and mobile applications from architecture and implementation through deployment and long-term maintenance.
- Worked directly with clients to gather requirements, estimate work, and transform business ideas into production-ready software.
- Built full-stack applications using React, Next.js, NestJS, React Native, PostgreSQL, MySQL, Socket.IO, Firebase, and AWS.
- Designed and deployed production infrastructure using Docker, Nginx, SSL, VPS, and cloud services.

Projects

Clean House Web & Mobile System

- Developed major features for an existing Next.js platform, including manager dashboards, warehouse management, delivery workflows, and customer-facing improvements.
- Designed and built the React Native mobile application from scratch, defining its architecture and implementing production-ready features.
- Built barcode scanning workflows for Zebra devices using native Android and DataWedge integration.
- Implemented real-time delivery updates with WebSockets and Firebase Cloud Messaging.

Wizer Insurance

- Took ownership of an existing React Native application, improving its architecture and user experience.
- Refactored the application into a feature-based architecture, improving maintainability and scalability.
- Developed a native iOS library for file preview functionality beyond existing third-party solutions.
- Integrated Flitt payments, Firebase Cloud Messaging, Notifee, Redux Toolkit Query, and backend administration features using NestJS.
- Reduced the Google Play crash rate from approximately 15% to 0.09% through production debugging and architectural improvements.

EasyPay Mobile Application

- Designed and developed the company's fintech mobile application from the ground up using React Native and native Android technologies.
- Defined the application's architecture, navigation, and technology stack.
- Implemented authentication, QR payments, money transfers, wallet management, loans management, biometric authentication, deep links, and push notifications.
- Integrated Firebase, React Query, Zustand, Notifee, and secure backend APIs.
- Improved application performance, security, and memory usage while supporting Android and iOS production releases.

MyCreditInfo

- Took ownership of an existing production React Native application, transforming an out-dated codebase into a reliable and maintainable product.
- Implemented major features including Stories, calculators, premium subscriptions, biometric authentication, and version management.
- Refactored the application into a feature-based architecture and modernized dependencies.
- Improved startup performance, rendering efficiency, and network performance through lazy loading and HTTP caching (ETags).
- Reduced the Google Play crash rate from approximately 20% to 0.03% using Firebase Crashlytics.
- Patched native Android libraries and bridged native code to improve security and platform compatibility.

Online School Application

- Contributed to a nationwide mobile platform used by students, parents, teachers, and school administrators.
- Implemented core functionality including authentication, messaging, homework, grades, attendance, examinations, and file uploads.
- Modernized the application's architecture, improving maintainability and scalability.
- Built Android and iOS CI/CD pipelines using GitLab Runner and Fastlane.
- Reduced the application crash rate from approximately 28% to 0.15% using Firebase Crashlytics.
- Took ownership during the project's final phase, delivering the majority of remaining features under tight deadlines.

Travel2Georgia

- Designed and developed the complete platform, including the customer-facing website, administration dashboard, and backend services.
- Managed the full project lifecycle from architecture and database design to deployment and production infrastructure.
- Configured cloud infrastructure, Docker, Nginx, SSL, and domain management to deploy and maintain the application.

Logistics Management Platform

- Developed administration dashboards and resolved production issues to improve system reliability.

VetApp

- Rebuilt an existing PHP backend in NestJS while preserving compatibility with the existing MySQL database.
- Designed the backend architecture and REST APIs using NestJS, TypeORM, JWT, and Swagger.
- Implemented authentication, role-based access control, appointment scheduling, veterinary records, file uploads, and payment processing.
- Integrated Bank of Georgia payment APIs and implemented background jobs for asynchronous processing.

Education

International Black Sea University, Computer Science

Tbilisi, Georgia
